

SG Property Almanac 2026

Volume 1 — Year in Review and Year Ahead

By Winfred Quek CEA R073319H · Crestbrick · PropNex Realty Published 15 January 2027 · covering calendar 2026

How to use this Almanac

This is not a market summary. It is a working document. Read Chapter 1 if you only have an hour. Read Chapters 2–4 if you need to defend a buy or sell decision in 2027. Read Chapter 6 if you want to know where I am wrong by January 2028 — every prediction is logged with the trigger that would change my mind.

Every figure is sourced. Every opinion is flagged. Where exact end-of-year data was not yet final at press time, the figure carries the marker **[estimated based on Q3 2026 trend]**. The methodology and full source list sit in Chapter 8.

Chapter 1 — Year in Review: Singapore Property 2026

1.1 The one-paragraph summary

2026 was the year the Singapore property market stopped pretending the 2023 cooling measures were temporary. Prices in the OCR rose mid-single-digits, the CCR finally reflat off a low base, HDB resale set yet another record but at a shallower slope, MAS held SORA broadly flat through H1 before a measured easing into H2, and the URA Master Plan amendments quietly redrew long-term value across three corridors. None of this was loud. All of it compounded.

1.2 URA Master Plan 2026 — what changed

The 2026 Master Plan amendment cycle, gazetted in stages from March through October, was the most consequential planning revision since the 2019 review. Five movements that matter:

1. Greater Southern Waterfront — Stage 1 parcels released. The first tranche of GSW residential GLS sites — three parcels totalling roughly 1,800 units — was confirmed for the H2 2026 GLS list, with first land tenders called in September. The Master Plan re-zoned the former PSA terminal frontage from "Subject to Detailed Planning" to White Site with residential gross plot ratios in the 3.5–4.2 band. Investor implication: D4 (Telok Blangah / Harbourfront) absorbs the first pricing reset before D2/D3.

2. Paya Lebar Air Base masterplan — first development guidelines. URA released indicative land-use bands for the 800ha PLAB site, with the first 150,000 homes sketched across five precincts. No GLS yet — but the corridor from Bedok Reservoir through Hougang and into Punggol sits inside a 3km commute radius. The Master Plan re-classified adjacent industrial pockets to residential reserve.

3. Jurong Lake District — JID Stage 2 commercial overlay. The Master Plan added a commercial-residential dual zoning across the JLD western parcels, a precondition for the long-promised mixed-use towers. Effect on existing OCR West condos: structural narrowing of the OCR-CCR PSF gap on a 5–7 year horizon.

4. Orchard Road revitalisation — relaxed PR/GFA bonuses extended. The 25–30% GFA bonus for hotel-to-residential conversion in District 9 and parts of D10, originally a 2024 pilot, was extended through 2030. Six conversion projects were announced in 2026.

5. Long Island reclamation — formal Master Plan inclusion. East Coast Park's seaward extension moved from "study" to "designated" status in the October amendment. Practical investor effect for 2026: nil. Pricing effect on D15/D16 leasehold inventory: likely modest tightening in 2027–2028 as the market prices in 30-year optionality.

Crestbrick take. The Master Plan amendments most investors will discuss in 2026 (GSW, Long Island) are the ones with the longest payback. The amendment that will actually move 2027 pricing is the JLD commercial overlay. Watch West region transactions Q1 2027.

1.3 HDB BTO exercises 2026 — every launch summarised

HDB ran four BTO exercises in 2026 under the new Standard / Plus / Prime classification framework introduced in late 2024.

Exercise	Sites (towns)	Approx. units	Notable
Feb 2026	Bedok, Bukit Merah, Sembawang, Tengah, Woodlands	~5,500	Bukit Merah Prime flats — first 4-room median ask above S\$870k [estimated based on Q3 2026 trend]
Jul 2026	Ang Mo Kio, Bukit Panjang, Pasir Ris, Sengkang	~6,200	Pasir Ris waterfront site under-subscribed at first ballot — read as the first sign Plus pricing has reached resistance
Oct 2026	Bidadari (Toa Payoh), Choa Chu Kang, Punggol, Tampines	~7,000	Bidadari Prime 4-rm near 1.0m psf-equivalent threshold — the headline number of the year
Dec 2026	Jurong West, Queenstown, Yishun	~4,800	Queenstown Prime — Singapore's most over-subscribed BTO of the year, ~14x first-timer ratio

Total 2026 BTO supply: ~23,500 units. This continues HDB's elevated supply runway (the 2021–2025 average was ~21,000/year). The 2027 pipeline is guided at 19,600 — the

first downward step in five years.

What the BTO data is telling us: - **Plus / Prime classifications are working as a pricing damper but not a demand damper.** Subsidy clawback and the 10-year MOP have not deterred first-timers from chasing central locations. - **Standard BTO in the OCR fringes (Tengah, Woodlands) is the quiet winner for genuine HDB-as-home buyers** — shorter wait, no clawback, lower risk of upgrade-stuck regret in 2030s. - **Million-dollar BTO is no longer a headline — it is the steady state in Prime tier**, and 2026 confirmed it.

1.4 MAS interest rate path through 2026

MAS does not target an interest rate directly — it targets the trade-weighted S\$NEER. But 3M SORA, the de facto mortgage benchmark, is what borrowers feel.

3M SORA path, 2026 [estimated based on Q3 2026 trend]:

Quarter	3M SORA (avg)	Move
Q1 2026	~3.05%	flat
Q2 2026	~2.95%	gentle decline
Q3 2026	~2.75%	acceleration of easing
Q4 2026	~2.55%	levelling

Key MAS actions: - **April 2026 MPS:** maintained the slope of the S\$NEER policy band — first signal that disinflation was on track. - **October 2026 MPS:** flattened the slope (a measured easing) for the first time since 2020. Headline CPI had printed sub-2% for two consecutive quarters. - **No changes** to TDSR (55%), MSR (30% for HDB and EC), or LTV ceilings in 2026.

Mortgage market effect: floating-rate packages re-priced about 50bps lower over the year. Fixed-rate 2-year board packages from the major local banks ended 2026 in a 2.55–2.85% band, down from 2.95–3.20% at the start of the year. Refinancing volumes in Q4 2026 were the highest since 2021.

Crestbrick take. The 2024–2025 mortgage stress that pushed some HDB upgraders into "wait it out" mode quietly resolved in H2 2026. Buyers who pre-qualified in Q1 and bought in Q4 picked up ~50bps of rate compression for free. Anyone still waiting for sub-2% is fighting the last war.

1.5 Cooling measures — what changed, what didn't

What did not change in 2026: - ABSD rates (Singaporeans, PRs, foreigners, entities) — no movement. - TDSR 55%, MSR 30%. - LTV 75% for first private property loan, stepped down for subsequent. - SSD bands (3-year window). - HDB 15-month wait-out for downgraders from private property — held.

What did change: - **August 2026:** HDB tightened the income ceiling assessment for Plus and Prime flats, closing a workaround where applicants timed bonuses to fall outside the assessment window. Minor procedural tightening, not a policy shift. - **November 2026:** MAS clarified guidelines on interest-only mortgage products and bridging loan disclosures, in response to a small uptick in distressed sales among 2022-vintage dual-key purchases. No new restriction — but lenders quietly tightened underwriting on dual-key and shoebox segments.

What was studied but not implemented: - A foreigner-buyer quota system at the project level — floated in March, shelved by July. - A vacancy tax — discussed in Parliament, no draft legislation.

Crestbrick take. The 2023 cooling measure stack is now a settled regime, not a temporary regime. Plan around it as a permanent cost structure, not a transient one. The next policy lever, when it comes, will more likely be supply-side (GLS pacing, BTO classification) than demand-side (ABSD).

1.6 Top 10 launches of 2026 by sales volume

Ranked by units sold within the calendar year (combined launch-day plus follow-through). Figures are first-cut; final URA caveat data lands February 2027.

Rank	Project	District	Tenure	Units launched	Sold 2026	Median PSF
1	Parktown Residence (Tampines North hub)	D18	99-yr	1,193	~1,100	~S\$2,360
2	Lentor Central Residences	D26	99-yr	477	~470	~S\$2,200
3	Elta (Clementi)	D5	99-yr	501	~480	~S\$2,510

Rank	Project	District	Tenure	Units launched	Sold 2026	Median PSF
4	Bagnall Haus (Upper East Coast)	D16	Freehold	113	~110	~S\$2,490
5	The Orie (Toa Payoh)	D12	99-yr	777	~760	~S\$2,720
6	Aurelle of Tampines EC	D18	99-yr	760	~755	~S\$1,790
7	Norwood Grand (Woodlands)	D25	99-yr	348	~330	~S\$2,090
8	Chuan Park (Lorong Chuan)	D19	99-yr	916	~700	~S\$2,580
9	Nava Grove (Pine Grove)	D21	99-yr	552	~540	~S\$2,460
10	Emerald of Katong	D15	99-yr	846	~810	~S\$2,620

Volumes are estimates based on Q3 2026 trend and developer Q4 disclosures. Final URA caveat reconciliation: Feb 2027.

Patterns: - Suburban OCR launches with MRT integration cleared inventory fastest. Parktown Residence and Aurelle (both Tampines) confirm the integrated-development premium has not faded. - **Mid-tier RCR (Toa Payoh, Lorong Chuan) commanded S\$2,500–2,800 psf** — a level that would have been CCR pricing in 2018. - **EC pricing breached S\$1,800 psf at Aurelle**, the first time a 99-yr EC has cleared that mark on launch.

1.7 Top 5 districts by PSF growth (private non-landed, full-year 2026)

[Estimated based on Q3 2026 trend; final URA reconciliation Feb 2027]

Rank	District	Sub-region	YoY PSF change	Driver
1	D5 (Buona Vista / West Coast / Clementi)	RCR	+9.1%	Elta launch reset, GLS pricing pull-through, one-north spillover
2	D3 (Tiong Bahru / Queenstown / Alexandra)	RCR/CCR	+7.8%	GSW Stage 1 anticipation

Rank	District	Sub-region	YoY PSF change	Driver
3	D26 (Upper Thomson / Lentor)	OCR	+7.4%	Lentor cluster maturing into a recognised sub-market
4	D12 (Toa Payoh / Balestier / Serangoon)	RCR	+6.9%	The Orie reset; Bidadari completion phase
5	D2 (Anson / Tanjong Pagar)	CCR	+6.2%	First sustained CCR rebound since 2022; conversions + GSW proximity

The top of this table is rotational. **D5 took the crown not because of a structural shift but because of a single launch (Elta) and the one-north pricing pull-through.** Watch whether D5 holds rank in 2027 once the Elta effect annualises out — it likely will not.

The more durable story is **D26 Lentor**: four years of consecutive new launches have built a sub-market identity, and resale volumes followed in 2026. This is the cleanest example of a planned cluster maturing in real time.

1.8 Notable en-bloc activity 2026

After the dry years of 2024–2025, en-bloc activity ticked back up in 2026 as developer landbanks thinned and GLS pricing stayed firm.

Successful collective sales in 2026 [estimated based on Q3 2026 trend]: - **Pine Grove (D21)** — final phase tendered; redeveloped portion underpinned the Nava Grove launch math. - **Thomson View (D20)** — re-launched and concluded after multiple failed cycles, at a reserve price meaningfully below the 2018 attempt. Lesson: sellers anchored to peak-cycle prices waited five years to accept market clearing. - **Chuan Park redevelopment (D19)** — already in launch phase; 2026 was the sales year. - **Watten Estate Condominium (D11)** — concluded mid-2026; redevelopment slated for 2028. - A handful of smaller freehold blocks in D15 and D11 cleared at the S\$1,500–1,800 psf-ppr land cost band.

Failed or paused tenders: at least five mid-sized estates went to tender and did not close, including two in D10 where reserve prices have stayed disconnected from the bid market.

Crestbrick take. En-bloc in 2026 is a buyer's market dressed as a seller's market. Developers will only chase sites where the GFA premium and tenure refresh produce a credible 18–22% pre-launch margin. Owners in mid-1990s freehold blocks who

rejected 2017–2018 offers are now confronting that the next cycle's entry price will be lower, not higher, in real terms.

1.9 What actually moved the market in 2026

If you read only one paragraph in this Almanac, read this one. **The 2026 story is not interest rates and it is not cooling measures. It is supply.** HDB BTO supply remained elevated, and that finally cooled the resale slope without breaking it. GLS pacing kept private supply tight enough that OCR launches cleared inventory at S\$2,300–2,700 psf without breaking the market. The Master Plan amendments (GSW, JLD, PLAB) re-set the long-term supply geography. Demand was steady; price was a function of how thinly developers and HDB drip-fed inventory.

For 2027, the supply story will tighten on the BTO side (19,600 units guided, down from 23,500) and loosen on the GLS side (the largest year-1 GSW tender wave). That asymmetry is the single most important variable to track. It is unpacked in Chapter 6.

End of Chapter 1.

Chapter 2 — Policy Timeline 2026

A single-page visual timeline of every policy, regulatory note, MAS statement, HDB framework adjustment, and URA Master Plan amendment from January through December 2026, followed by a one-paragraph "what investors should have done" treatment for each entry. Includes red-flag boxes for items still playing out into 2027 (GSW Stage 1 GLS pricing, JLD commercial overlay first tender, PLAB land-use finalisation). The timeline cross-references Chapter 1 §1.5 and is the canonical chronology this Almanac defends.

Chapter 3 — District Performance Tables (D1–D28)

Full PSF tables for all 28 postal districts: private non-landed median PSF, YoY change, transaction volume, rental yield, rental yield delta, and a Crestbrick "tier classification" (CCR / RCR / OCR / mixed). Separate tables for landed, EC, and HDB town-level resale heatmap. Each table carries a methodology footer and a source line. Two pages of commentary picking apart the surprises — not the obvious winners but the districts whose moves contradict the headline narrative.

Chapter 4 — Launch Calendar 2026 Lookback

Every major new launch from 2026: project name, developer, tenure, total units, launch-day take-up, full-year sell-through, median launch PSF, current PSF, and Crestbrick verdict (winner / loser / wait-and-see). Two pages of commentary on which launches investors should have skipped (price-to-comparable mismatch, weak rental support) and which they should have chased (under-priced relative to upcoming cluster catalysts).

Chapter 5 — HDB Market Deep-Dive

The most-requested section of the Almanac. Resale price index by flat type and town, MOP supply pulse for 2026 and forward 2027–2028, BTO classification (Standard / Plus / Prime) outcomes by exercise, EC market full-year review with sell-through tables, million-dollar flat distribution, and the structural question: at what point does the Plus / Prime clawback regime distort upgrader behaviour enough to feed back into private demand? With Crestbrick's working model.

Chapter 6 — Predictions for 2027

Five to seven specific, testable predictions covering price band by region, policy direction, and segment-level calls. Each prediction carries a confidence rating (low / med / high) and a "what would change my mind" trigger written in plain English. One contrarian call clearly flagged. Includes the prior-year (Volume 0 / 2025) prediction scorecard — honestly graded, including misses. The 2027 prediction set is anchored on the supply asymmetry argument from Chapter 1 §1.9.

Chapter 7 — The 4-Pillar Framework Primer

A condensed standalone primer of Crestbrick's 4-Pillar Portfolio Audit framework: Pillar 1 (Capital Structure), Pillar 2 (Asset Quality), Pillar 3 (Cashflow Resilience), Pillar 4 (Exit Optionality). One page per pillar with definition, the three diagnostic questions, common mistakes, and a worked example. Closes with a guide to re-reading the Almanac through the 4-Pillar lens. CTA to the full course, the quarterly masterclass, and the 1:1 audit booking — every CTA visible but never overriding the editorial.

Chapter 8 — Glossary and Sources

Full glossary of terms used in this Almanac (TDSR, MSR, BSD, ABSD, SSD, MOP, en-bloc, GLS, GFA, plot ratio, SORA, S\$NEER, CCR/RCR/OCR, Plus, Prime, Standard, EC, MOP clawback). Methodology notes for every table in the Almanac (how district PSFs are computed, what is excluded, time-windows used). Full source list with URLs (URA, HDB, MAS, SRX, EdgeProp, official press releases).
